DETAILS	GOODS	MILESTONES	ROUTING AIS	DOCUMENTS	COMMERCIAL INVOICES	EXPORT DECLARATIONS	ISF	REFERENCES	HISTORY	CHARGES	

Within Container Visibility section

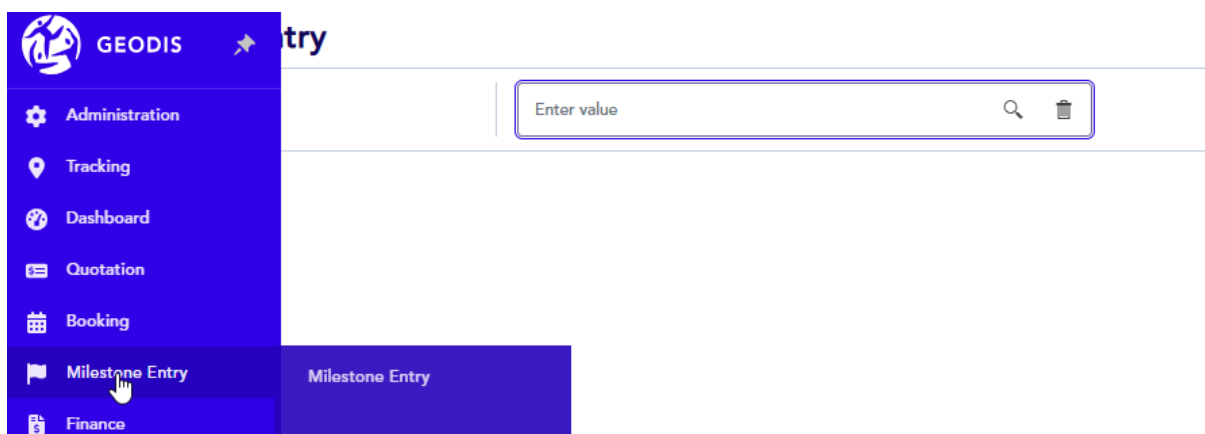

Delivery address currently is pulled from the shipment delivery tab, and vice versa for the pickup. If a container is linked to a TB, we would like the address to pull from the transport booking instead

Milestone entry – these updates now need to filter to the TB rather than the shipment level updates.

NxG :

Transport Booking can either be standalone, or can be linked to a shipment, consolidation, declaration record.

The TB is the same across all of these records, and the fields do not change. The fields that are visible to an operator are dependent on the transport booking template that has been utilised when creating the booking.

The instructions section > Standard View shows us the addresses that are listed on the transport booking. In the example, we have simply the pickup at CFS address and delivery to consignee address, however, we could have any variation of the possible addresses, and it is also possible to multiple pickup and/ or delivery addresses on a single TB. ALL of these should be shown in IRIS. All TBs visible to customer on a shipment?

The Instructions > Instruction View tab is an expansion of the Standard View tab with a bit more information

If present, all of these fields should be visible in IRIS. If not present in the TB, the only mandatory fields are the Estimated and Actual columns to indicate to the customer that this data will be forthcoming at a later date.

If TB is a standalone, not linked to a shipment or declaration, then the Packing tab should be visible with all of the data shown there.

If standalone, the Additional Details and info shown there should be visible in IRIS

Milestones at TB level :

Below are all of the core milestones on a TB level – highlighted are the milestones that should reflect in IRIS even if blank :
